EACH YEAR, THE FILM INDUSTRY DONATES $4 BILLION TO THE TOBACCO INDUSTRY.

NOT YOUR IDEA OF PHILANTHROPY?

By now, you know the issue. In large-scale studies on four continents, American movies remain the single biggest recruiter of new young smokers.

What’s on-screen promotion worth to the big tobacco companies?

More than $4 billion in lifetime sales revenue from each year’s recruits in the U.S. alone.*

Of the nearly 400,000 U.S. kids recruited to smoke by movies this year, 120,000 will eventually die from tobacco diseases. Heart disease, lung disease, cancer.

R-rating future smoking would avert half of those deaths: 60,000. How big a check would you need to write to spare 60,000 lives, year after year? That’s equivalent to ending all U.S. deaths from drunk driving, criminal violence, drug use and more forever, overnight.

Yet one of the most important public health advances in the last half-century won’t take a check.

Just your professional courage. By committing to evidence-based policy solutions, with genuine accountability industry-wide, you can get smoking out of youth-rated movies, once and for all.

To comfort human suffering is honorable.

To eliminate suffering’s cause is the opportunity of a lifetime.
